Use this card to check one IDS tool.

If the IDS can be exported run the IDS-audit-tool.
<https://www.xbim.it/ids>

Name and IFC version applies to the specification.

Dotted circles are optional features.
They count as a tie-breaker to determine a winner.

Cardinality:
- required (Must have / minOccurs 1, maxOccurs unbounded)
- optional (May have / minOccurs 0, maxOccurs unbounded)
- prohibited (May not have / minOccurs 0, maxOccurs 0)
- cardinality is set for the complete applicability.
- cardinality for requirements are set separately.

Pattern:
Regular Expressions can be used.

Restriction:
a list of values can be set.
(single value is always possible)

Length:
the number of characters can be set.
Either a fixed amount or a minLength / Maxlength.

Bounds:
Numbers can be <, <=, >, >= than a
specified value or within a specified range.
